Accenture in India

Application for Data Platform Engineer -- Accenture in India

Dear Hiring Team at Accenture in India,

I am writing to express my strong enthusiasm for the Data Platform Engineer position at Accenture in India in Hyderabad. With 5 years of hands-on experience at Deloitte engineering production-grade Generative AI applications, multi-agent systems, and scalable RAG pipelines, I have consistently focused on building resilient, high-accuracy AI solutions that solve complex enterprise challenges.

In my recent work at Deloitte, I architected 'FinPilot AI'--a multi-agent financial platform utilizing LangGraph ReAct orchestration and the Model Context Protocol (MCP) to ingest complex enterprise data while reducing latency by 80%. To enforce deterministic compliance and prevent hallucinations, I implemented rigorous evaluation pipelines with DeepEval, achieving a 93% benchmark score. Additionally, I led the architecture of 'ALAN-GPT', indexing technical documentation across 500+ production ML models with a 91% retrieval evaluation score.

Accenture in India's mission and the technical scope of the Data Platform Engineer role align perfectly with my background in Python, machine learning algorithms, LLM frameworks, and containerized deployments. I am eager to bring my technical expertise and passion for AI engineering to your team. Thank you for your time and consideration, and I look forward to discussing my application further.

Sincerely,

Hassan Mahmood
